**** External Email ****

Tox, any comments on this daily?
XA, you good with this last daily?

Cook,

You don't have to change the reporting period on the map, as we did conduct our air monitoring and were available to send out the team to confirm/conduct air monitoring had an elevated measurement been observed by any of the other members of UC last night.

Thanks.

This will be our final daily report. I'll send out a more formal notification to the team later today upon my demobilization. Until that time, our team will remain ready to flip the switch back on. After my demobilization, I'll maintain communication with the facility and be prepared to stand UC back up, should another incident occur during their remediation/consequence mgmt phase.

Thanks Cook et al.
Adam

Subject: South 4 Group - Reporting Period #16

Good morning,

Please find the attached map and data table for reporting period 16.

Please let me know if this the "final" reporting period. Do I need to adjust the reporting period label on the map since technically we stopped air monitoring yesterday evening @2020?

EPA conducted **handheld air monitoring** from December 12, 2019 at 06:00 to December 12, 2019 at 20:20 at 179 locations in the communities surrounding the TPC Group facility in Port Neches, Texas. The air monitoring results were reported below the screening level at all locations for particulates, total volatile organic compounds (VOCs) and butadiene.

EPA conducted **surface water sampling** on December 12, 2019 and collected 7 water samples at 6 sample locations. The surface water samples were collected along the Neches River and in canals to the southeast of the site and will be analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), total organic carbon (TOC), glycols, total petroleum hydrocarbons (TPH) and oil & grease. The results from the sampling event will be compared to the TCEQ Surface Water Quality Standards (TSWQS), or to TCEQ Texas Risk Reduction Program surface water protective concentration levels (PCLs), if a WQS is not available for a chemical.

Thanks,

David Cook
